Cascade Energy Engineering Wins MicroDataLogger Equipment

BOULDER, CO – Cascade Energy Engineering received the free MicroDataLogger unit offered to participants of an online survey conducted by Architectural Energy Corporation (AEC). The winner was selected in a drawing.

To be eligible for the drawing, survey respondents had to complete the online survey and submit their contact information.

“I was amazed at the response that we had with our online survey,” said Jerry Moechnig, marketing and sales representative for AEC. “We had a 20 percent return on our marketing of the survey. That tells me that we’ve got some loyal and active customers out there.”

The online survey asked about measurement and monitoring needs that may or may not have satisfied by existing logger products. All confidential responses to the survey will be used to better develop new products that best meet the needs of AEC’s customers.

Cascade Energy Engineering, the winner of the equipment, provides industrial energy efficiency consulting. Specialties include industrial refrigeration, compressed air, air handling, pumping, waste water treatment, and lighting systems. Cascade relies heavily on detailed data logging of most processes and equipment for identification and analysis of energy efficiency opportunities, as well as commissioning and final inspection.

Architectural Energy Corporation is a leading business-to-business energy engineering firm concerned with energy, buildings, and the environment. The mission of Architectural Energy Corporation is to speed the transition to a sustainable economy by improving the energy efficiency, environmental responsiveness, and use of renewable energy in new and existing buildings. This mission is accomplished through a comprehensive and innovative suite of professional services and products that enable AEC's clients to achieve and to maintain peak energy and environmental performance over the life of their buildings.
